

# JOIN US THIS FALL FOR THE TACTICAL FLIGHT EVENT OF THE YEAR!

The National Aerospace Training and Research (NASTAR<sup>SM</sup>) Center, a subsidiary of the Environmental Tectonics Corporation (ETC), opens its doors to welcome all domestic and international military fighter and fast jet pilots, as well as senior government officials, for a tactical flight event utilizing our next generation of tactical flight motion-based simulators – the Authentic Tactical Fighting System (ATFS-400<sup>TM</sup>) “Phoenix”.

Settle into the high fidelity cockpit and fly multiple sorties against a comparable, ground based Operational Flight Simulator (OFS)-400. Each sortie will engage Blue Forces (friendly) and Red Forces (OPFOR) for the most realistic combat environment available in fast jet training.

## WHY PARTICIPATE?

- Participants in Orange Flag '09 will become part of an elite group of aviators that have an opportunity to experience the future in motion-based tactical flight simulation technology. Be the first in your country to become part of this elite group.
- Within this forum each participant will have the ability to assess their combat readiness and projected survivability.
- Experience the technological advances that will elevate your country's operational readiness and produce safer and more prepared aircrew.
- Participate in an informal focus group and provide critical feedback, contributing to the improvement of the next generation of flight simulation technology.
- Have a good time and share your stories with other pilots.
